

Brand Name : Injection Adolor-AQ(Ampoule & Vial)

Contnet : 75mg per ml Diclofenac injection

Mechanism of action :

Diclofenac is a NSAID, widely prescribed analgesic in many conditions. NSAIDs work by blocking the action of a substance in the body called cyclo-oxygenase(enzyme). Cyclo-oxygenase is involved in the production of prostaglandins (chemicals in the body) which cause pain, swelling and inflammation.

There are many side-effects of oral diclofenac most common includes nausea, stomach pain or upset, vomiting.

However, injection Diclofenac sodium retains analgesic effect without causing local side effects.

How to use :

As directed by the physician.

Keep out of reach of children.

Store in a cool, dry place. Protect from direct light.
