

Brand Name : Tablet Cefizen CV-325

Content: Cefixime trihydrate 200mg + Potassium clavulanate 125mg

Mechanism of action : Cefixime is a semi-synthetic (partially man-made), oral antibiotic in the cephalosporin family of antibiotics. Cefixime stops bacteria from multiplying by preventing bacteria from forming the walls that surround them. The walls are necessary to protect bacteria from their environment and to keep the contents of the bacterial cell together; bacteria cannot survive without a cell wall. Clavulanate is a β -lactamase inhibitor. This potentiates the activity of Cefixime.

How to use :

Each tablet is taken as prescribed by physician.

Keep out of reach of children.

Store below 25°C in dry & dark place.

Use in :

- Gastrointestinal(GI) Infections.
- Respiratory Infections.
- Community acquired pneumonia.
- Uro-genital infections.
