

Brand Name : Tablet Levi-M

Content : Levocetirizine dihydrochloride 5mg+Montelukast sodium 10mg

Mechanism of action : Levocetirizine (as levocetirizine dihydrochloride) is a third-generation non-sedative antihistamine, developed from the second-generation antihistamine cetirizine. Levocetirizine works by blocking histamine receptors. It does not prevent the actual release of histamine from mast cells, but prevents it binding to its receptors. This in turn prevents the release of other allergy chemicals and increased blood supply to the area, and provides relief from the typical symptoms of hayfever

Montelukast is a leukotriene receptor antagonist (LTRA) used for the maintenance treatment of asthma and to relieve symptoms of seasonal allergies. It is usually administered orally. Montelukast is a CysLT1 antagonist; that it blocks the action of leukotriene D4 (and secondary ligands LTC4 and LTE4) on the cysteinyl leukotriene receptor CysLT1 in the lungs and bronchial tubes by binding to it. This reduces the bronchoconstriction otherwise caused by the leukotriene and results in less inflammation.

How to use :

Each tablet is taken as prescribed by physician.

Keep out of reach of children.

Store in a cool, dry place. Protect from direct light.

Use in : Asthma.

COPD.

Urticaria.

Allergic Rhinitis & Allergen Induced Broncho Constriction

Packing :

Each film coated tablet Levi-M is available in 1*10 alu alu.
