

**Brand Name :** Tablet Rabeptral

**Content:** Rabepazole sodium 20mg

**Mechanism of action :**

Acid is secreted in the stomach by a type of cell called the parietal cell. There is an enzyme pump (called the H<sup>+</sup>/K<sup>+</sup> ATPase pump) on the side of this cell closest to the stomach lining that pumps acid into the stomach. This is known as the proton pump. The class of drugs to which rabepazole belongs inhibits this pump. This is why they're called proton-pump inhibitors.

Specifically, rabepazole blocks the final step in the acid secretion. In contrast to the other PPIs, rabepazole forms a partially reversible bond with the proton pump. It also works at a broader range of stomach pH. For these reasons, it works longer than other PPIs.

**How to use :**

Each tablet is taken as prescribed by physician.

Keep out of reach of children.

Store in a cool, dry place. Protect from direct light.

**Use in :**

- Heartburn.
- Hyperacidity.
- Duodenal & Gastric ulcer.
- GERD & Drug induced Gastritis

**Packing :**

Each enteric coated tablet Rabeptral is round in shape and available in 1\*10 alu alu packing.
