

Brand Name : Tablet Synerzen

Content: Aceclofenac 100mg + paracetamol 500mg

Mechanism of action :

Aceclofenac has higher anti-inflammatory action than other NSAIDs(Non-steroidal anti-inflammatory drugs).

Aceclofenac works by blocking the action of a substance in the body called cyclo-oxygenase. Cyclo-oxygenase is involved in the production of prostaglandins (chemicals in the body) which cause pain, swelling and inflammation. Aceclofenac is the glycolic acid ester of diclofenac.

Anti-inflammatory activity: The anti-inflammatory effects of Aceclofenac have been shown in both acute and chronic inflammation. It inhibits various mediators of pain and inflammation.

Paracetamol is a clinically proven analgesic and antipyretic agent with weak antiinflammatory effect. The central analgesic action of Paracetamol resembles that of aspirin. It produces analgesia by raising pain threshold.

The antipyretic effect of Paracetamol is attributed to its ability to inhibit COX in the brain where peroxide tone is low.

How to use :

Each tablet is taken as prescribed by physician.

Keep out of reach of children.

Store in a cool, dry place. Protect from direct light.

Use in :

- Osteoarthritis.
- Rheumatoid arthritis.
- Ankylosing spondylitis.
- Dental pain.
- Gynecological pain.

Packing :

Each tablet Synerzen is oval in shape and available in 1*10 alu alu packing.
